

Rotary Separator

AMSPR

- The machine has two separate sections in order to separate small and large impurities from the main products and the products are cleaned in the passage of all surface of the meshes in the upper & under side sections.

- Meshes of the machine is cleaned by elastic balls.
- The machine has vibration movement and is created by an adjustable system.
- 8 special joint shock absorbers make the multi dimension movement possible.

- The machine can be installed on the chassis or can be hanged from the roof.
- Up & down frames are locked by a special mechanism & bringing out the frames are easily possible by opening these locks .
